Abstract - Interior Design works has become more important than it used to be as the interior works takes quite a big chunk in an overall construction works. Nowadays, the clients want to play bigger role in implementing the interior task and eager to use or have the green or sustainable building idea to be implemented into their interior and also on their exterior project. So, interior design with sustainable factors has become more important.

Thus, we must look back into the academic sectors where this field must play an important role in producing the designers especially the interior designer with fair knowledge on environmental friendly designs or in today term as design with sustainable or green design factors. Therefore, with the above goals, this research become an initial platform trying to measure on the students sensitivity in applying interior design sustainable issues into their academic studio projects. This study however will discuss on design studio project that addresses sustainability through an environmentally based research focus.

Keywords - sustainable design, sustainable education, sustainable interior, teaching sustainable
